

# WEMO

## WEMO Kempink durability tester

Accuracy, reliability and good value, specify the **WEMO Kempink pellet durability tester**, the standard for pellet durability lab testing in animal feed factories as well as bio-energy pellet factories.

Testing and controlling the quality standards of your production, should never be a matter of coincidence. Ease of operation and an automatic quick start, combined with the smart use of a converter and

small PLC, ensure reproducibility. This means that comparing multiple tests, executed even with multiple testers in different locations, has finally become a reality using the **WEMO Kempink tester**.

Sifting fines in the tester automatically and an exaggeration of the pellet-wear, gives a very good bandwidth readout for clear and measurable quality improvement.

- Own production
- Worldwide delivery
- Tested extensively
- Good references
- Ease of operation
- Reliable and accurate

# sampling solutions

Samplers can be chosen from standard or special (customised) for all possible sample points applicable for the product to be sampled and place in the process. Simple manual air-operation or semi- or fully automatized. From powder to granulates in food, feed, chemicals and recycling.

A sample can be collected in a container, in a plastic bag, manually or fully automatized. A variety of collectors, from a pipe, simple valve, a hand slide, visual transparent buffer station or directly in a sample container, all with or without product sensor detection, are available.

Multiple samples can be collected, using valves, directing samples to different buckets, or a carousel for multiple sample collection. A carousel is semi-automatic. The next level is: fully automated sample bagging and labelling device.

Multiple sample points for full control of your sampling for quality control, fully automatized with pneumatic vacuum transport system. Share your wishes with our sales and engineering team, we will make it possible. Don't worry: is your typical solution not in this document? We specialize in specials. For something completely different, we offer engineering and testing at affordable prices.
